RAZORPAY AI × PM BUILD CHALLENGE · TRACK 1: RAZORPAY IN YOUR POCKET · PRODUCT NOTE

Dues: simplifying collections for micro B2B suppliers

See who owes you, by client, and nudge them on WhatsApp in under 2 minutes.

Prototype: razorpay-dues-rajdeepnag2410-5143.vercel.app
Demo: Google Drive video

1. THE PROBLEM — Paid weeks late, chasing by hand

Micro suppliers who sell to businesses on credit get paid **weeks late**. Their Razorpay links show no client name, totals or days late, so they piece together **who owes what** from WhatsApp and chase each client by hand. Chasing a regular feels awkward, so they wait, and the cash stays stuck.

2. MARKET OPPORTUNITY — Paid far past the legal limit

	days
Legal limit, no written terms	15
Legal cap, written terms	45
Actual average, SMEs	73

₹7.34 lakh Cr stuck in delayed payments to Indian MSMEs (Mar '24)

3. TARGET SEGMENT & PERSONA — Micro B2B suppliers who bill first, collect later

Indian MSMEs 6.4 crore

- **Micro, owner-run** · 1–5 people
- **Sell to businesses on credit** · 5–30 clients
- **Run it from the phone** · WhatsApp + links

SAME JOB, MANY TRADES: Bakers → cafés · Tiffins → offices · Caterers → events · Printers → shops · Florists → hotels · Plants → offices · Artists → brands · Tutors → schools

EXAMPLE USER
Jahnvi, 32 · home baker, Bengaluru

Goal: get paid on time, keep cafés happy.

- Supplies ~10 cafés, paid 7–30 days late.

> *"By Friday I don't know which café still owes me. I hate chasing people I see every week."*

4. STRUCTURAL WHITESPACE — Nothing serves her, on her phone

	ON DESKTOP	ON THE PHONE
BIG FIRMS, INVOICES	**RazorpayX Receivables Agent** Banking+ users, invoices. Desktop autopilot, early access.	Out of reach for a home baker
MICRO, LINKS	**Payment Link reminders** Seen on the live app: SMS/email only, OFF by default, switch on desktop.	THE GAP **Dues** Micro suppliers, her WhatsApp, she approves.

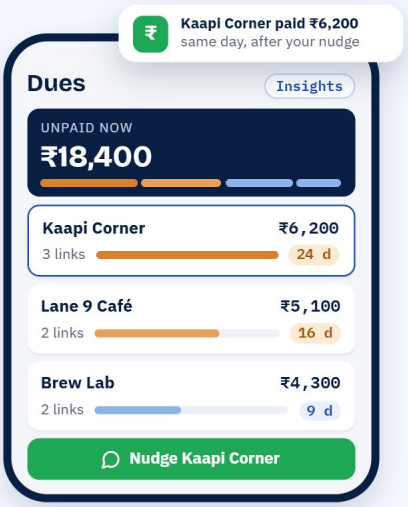

5. WHY MOBILE WORKS — The money talk lives there

- **On the road, not at a desk.** She checks dues between drops.
- **Clients and alerts are there.** Orders on WhatsApp, payment alerts in the app.
- **A one-thumb, 75-second job.** One list, one tap. No laptop, no spreadsheet.
- **Today's fixes are desktop-only.** So she never finds them.

6. KEY PRODUCT & AI DECISIONS — Trust first: she stays in control, the data stays true

PRODUCT	**Group by client, not by link.** One new Client field turns loose links into "who owes what".	**Her WhatsApp, not a bot.** Opens from her own number, a sender clients know. No API setup.	**Inside the app, on Home.** A tile next to Payment Links. Paid status updates itself.
AI	**AI drafts, she sends.** She approves every nudge. Auto-nudge is opt-in, max 3, stops on payment.	**Facts from data, words from AI.** Amounts, dates and the link come from Razorpay. The model only writes the words.	**She picks tone and language.** Friendly, Direct, Firm · English, Hinglish, Hindi. Insights show which gets paid.

7. THE SOLUTION: DUES — One list of who owes, one tap to nudge, then paid

Jahnvi's job: get Kaapi Corner to pay — ≈ 75 s with Dues

	1 Open	2 See who owes	3 Check what's paid	4 Write the ask	5 Send, track
TODAY ~20 min, often given up	3 apps and notes	✕ Drop-off No client view	Matches UPI by memory	✕ Biggest drop-off Awkward, so she waits	✕ Drop-off Reminders SMS/email, OFF
DUES done in ≈ 75 s	**5 s** · Home card: ₹18,400	**10 s** · grouped by café, days late	**15 s** · cash? tap "Mark paid"	**30 s** · AI draft, she edits	**15 s** · her WhatsApp

Data: a new **Client** field groups unpaid links, one link per client.

AI: drafts from the facts, in her tone and language. **She approves.**

Send: opens **her own WhatsApp**, text filled in. No API setup.

Then the loop closes: paid alert ("Usually 12 days. This time: same day.") · paid clients move to Completed · Insights compare nudged vs not.

8. SCOPE — Built, and left out

IN SCOPE

- **Dues by client** · totals, days late, credit terms
- **One link per client** · cash = "Mark paid"
- **Her WhatsApp** · known sender, she approves

OUT, ON PURPOSE

- ~~Invoicing, GST~~ · Vyapar, Zoho do it
- ~~Auto-send by default~~ · opt-in, max 3
- ~~Credit, early payout~~ · later, with data

9. SUCCESS METRICS — Targets

NORTH STAR METRIC
₹ paid within 7 days of a nudge

< 2 min	**Speed** · open → nudge sent
+20 pts	**Outcome** · paid in 7 days: 53% if nudged vs 33% if not
40%	**Adoption** · weekly active
< 1%	**Guardrail** · nudges on paid dues

10. WHAT I'D TEST NEXT — Pilot, then automate

A/B pilot	30–50 suppliers. Half their overdue links nudged, half not. Is the paid-in-7-days lift real?
First-nudge tone	Friendly vs Direct: which gets paid faster with no client complaints?
Client field	Do suppliers fill it when we suggest one from the phone number?
Then automate	Auto-nudge opt-in rate, with complaints flat. Match UPI paid outside links.
